15 February 2018 | Berlin
12 November 2018 | Berlin

Attendance fee
790,00 EUR plus 19% VAT/
participant

AIMS – REASONS TO ATTEND

- You will learn the basics about the REACH Regulation: Which substances are affected and what does REACH require?
- What does conformity with REACH mean for products (taking as an example cadmium and hard-chromium plated surfaces or corrosion protection using chromium)
- How to develop risk communication and risk management measures
- Who is responsible for what in the supply chain and can tasks be delegated?

GENERAL INFORMATION

For many aerospace companies, the complexity of REACH requirements poses a major challenge. REACH has an impact not only on internal processes but also on the entire supply chain. This means that airlines, OEMs, suppliers and MRO services need to comply with a variety of authorization and restriction requirements.

After expiry of the registration deadlines for large tonnages in 2010 and 2013, the last registration deadline for pre-registered substances will expire on 31 May 2018. By then the substances that are manufactured or imported in quantities of up to 100 tonnes per year must be registered. This last registration deadline particularly affects the aerospace industry, which now has the task of producing a registration dossier.

TARGET GROUP

Aerospace companies | OEMs, suppliers and MRO | Quality assurance | legal department | purchase | Occupational safety and environmental protection | supply chain management | Product safety.

Speaker

Kerstin Heitmann
Senior Expert Chemicals Management
UMCO GmbH

PROGRAM

09.00 Welcome by the speaker

Principles of the REACH Regulation

- Materials, preparations and articles
- Legal status of the REACH and CLP Regulations
- No data – no market – registration and evaluation of chemical substances
- Reasonable control – What does REACH mean by safe handling of chemicals?

10.45 Coffee & Tea/Networking

11.00 Risk communication and risk management

- Communication in the supply chain
- Substances of very high concern
- Requirements for substances in articles
- Authorization and restriction

12.45 Lunch break – Invitation to lunch

14.00 REACH conformity

- What does conformity with REACH mean for products?
 - Examples
- What does conformity with REACH mean for process and structures? – Examples
- Interfaces with other areas of law (e.g. RoHS, ELV)

15.30 Coffee & Tea/Networking

15.45 Relevance for standardization – Discussion

- Which REACH requirements may be relevant for which forms of standardization?
- What are the minimum requirements and what goes beyond them?
- What type of document is available/necessary?

17.30 Concluding remarks of the speaker and end of the seminar
